

## Sewing table

KA115

The conveyor is synchronized with the sewing machine during sewing and reverses at high speed to assist turning the product, suitable for large products (quilts, bedspreads etc.) Will increase production and helps reduce the risk for repetitive injury.

The sewing table can be equipped with different types of sewing heads. It can be incorporated inline in a dispenser, folding or inspection system. A good skilled operator can sew a product size: 200cm x 200 cm in approx. 45 seconds. Max size on products: 240cm x 260cm.
